Outdoor Electrical Safety Tips

With the warm days of summer upon us, you are probably spending more time outdoors. While we all enjoy this special time of year, we need to be aware of a few simple safety tips:

- Teach children to stay away from electric transformers and substations and explain what posted warning signs mean.
- Avoid damp conditions when using electricity. Keep all electrical devices and cords away from water.
- Place waterproof covers on all outdoor outlets.
- Install ground fault circuit interrupters (GFCIs) in outlets where water may be present.
- Only use extension cords marked for outdoor use; match power needs of an electric tool or appliance to the cord's label information.

Energy Efficient Landscaping:

A well-designed landscape not only adds beauty to your home, but it can also reduce heating and cooling costs. On average, landscaping for energy efficiency provides enough energy savings to return an initial investment in less than eight years.

Membership MATTERS

Our Energy, Our Future: A Dialogue With America

Blue Ridge Electric remains dedicated to providing you with safe, affordable, and reliable electric power in an environmentally sound way. But with a national growing demand for electricity and pressure mounting in Congress to address climate change, it's time for us to get involved and ask our elected officials some tough questions. And with national energy policy under development, now is the right time to get involved.

To develop the technology needed to keep the lights on and rates affordable, the federal government must exercise committed leadership and provide funding. Without funding for technology, and without a sound, responsible, sustainable energy policy, we risk returning to a time when electric service was a privilege enjoyed only by the wealthy.

As electric cooperative consumers, you can help prevent that from happening. Please contact your elected officials today and ask this question...

"What are you doing to fully fund the research and development required to make emissions-free electric plants an affordable reality?"

To help our consumers easily communicate with elected officials, electric cooperatives across the country have launched a grassroots campaign called "Our Energy, Our Future: A Dialogue With America." This initiative is designed to help us start a discussion by asking our lawmakers a few critical questions. After all, far too often questions don't get asked of policy makers until plans go wrong. We believe it makes sense to know the answers before the laws are passed.

You can help your elected officials and yourself by having this conversation about the cost impact of legislation currently being debated. Please visit your cooperative's web site at www.BlueRidgeEMC.com or go directly to www.ourenergy.coop to contact your elected officials and make your voice heard.

THE Perspective

An Editorial by Chief Executive Officer Doug Johnson

Technology is Key in Keeping the Lights On

Right now, there are a lot of "what-ifs" surrounding electric power. As a nation, we need to add more generating resources to meet growing electric consumption.

As your provider of safe, affordable, and reliable power, it's our job to make prudent, long-term energy decisions that will benefit you and the communities we serve for decades to come. But today those decisions are mixed up with politics like never before. Every question of supplying power is being impacted by the debate surrounding how best to meet climate change goals. Policy limiting carbon dioxide emissions is becoming more likely, although specifics are being debated in Congress.

Massive investments in new technology will be required – and soon – to find a balance in meeting both our nation's energy and climate change goals. The Electric Power Research Institute estimates it will take a research investment of \$1.4 billion a year from now until 2030 to develop new technology such as carbon capture and storage for our power plants. This technology is particularly important for North Carolina's electric consumers since about 50 percent of our electricity comes from coal generation.

Once we add this advanced technology to the equation, we can develop power plants that burn coal and isolate carbon dioxide emissions. The gas can then be compressed and pumped for permanent safe storage deep underground. Many experts believe that with the right financial commitment from the federal government, cost-effective carbon capture and storage technology could become commercially available around 2020.

Our Energy, Our Future
A Dialogue With America

engaged in a grassroots campaign called "Our Energy, Our Future" to start a dialogue with lawmakers about critical questions such as technology's role in our energy future. Please visit www.ourenergy.coop to contact your elected officials and add your voice to the campaign.

But, this is just one potential piece of the puzzle, and until our elected officials agree to increase the necessary funding, uncertainty remains.

At Blue Ridge Electric, we are dedicated to keeping you supplied with reliable and affordable electricity. We are, with electric cooperatives across the county,

Audited Financials Complete

Blue Ridge Electric's financial records for fiscal year 2007 have been audited by the firm of Adams, Jenkins & Cheatham, pc. The audit indicates the cooperative and its subsidiary are in sound financial condition and reflects an unqualified (highest level given) opinion of the audit firm.

The cooperative's 2007 Consolidated Audit Report is now available in each district office for your review. The 2007 Blue Ridge Members Foundation financial report is also available.
